GANDY—One of the oldest and best very late berries on our list

Read Carefully Before Ordering

TRUE TO NAME.—While we exercise the greatest care to have every tree and plant true-to-name, we are ready, on proper proof, to replace any stock shipped by us that proves otherwise, free of charge, it is understood and agreed that we will not be held responsible for any greater sum than the cost of the stock, should any prove untrue.

CLAIMS.—If any, must be made within five days from receipt of stock. We cannot become responsible for misfortune of stock caused by drouths, floods, frosts, insects, fire, etc., and by stock not being taken from the express office for several days after its arrival. WE WILL NOTIFY YOU WHEN YOUR ORDER HAS BEEN SHIPPED.

TERMS: Cash with order; but orders will be booked if one-fourth value is received with order, remainder to be sent before time for shipment. We allow a cash discount of 5 per cent on all orders large or small when cash accompanies order in full. Remit by money order, registered letter, check or draft. WE ACCEPT LIBERTY BONDS OF ALL ISSUES AT FACE VALUE IN PAYMENT FOR NURSERY STOCK, BUT NO CASH DISCOUNT IS ALLOWED WHEN PAYMENT IS MADE BY BONDS. Send bonds by registered mail.

WHEN ORDERING.—Be sure to sign your name and address plainly. No difference how often you may have written us, always give your full name and address, and write your Name, Postoffice, Express of Freight Office, Street or R. F. D. No., County and State very plainly. By so doing you will save us much trouble and avoid the possibility of delay or mistake in filling your orders.

TWENTY-FIVE.—Strawberry Plants, Asparagus roots, etc., are tied in bundles of 26 for 25. We aim to give good count.

AT PURCHASER’S RISK.—All strawberry plants shipped after May 10th will be packed and shipped in the best possible condition, but at purchaser’s risk.

STATE OF DELAWARE
STATE BOARD OF AGRICULTURE
Certificate of Nursery Inspection
To Whom it May Concern:

Dover, Del., September 27, 1921.

This certifies that I have this day examined the nursery stock and premises of G. E. Bunting & Sons, Selbyville, Delaware, and that said nursery stock is apparently free from crown gall, peach yellows, peach rosette, the San Jose scale and all other plant diseases and insects of a seriously dangerous nature, that may be transferred on nursery stock.

This certificate may be revoked by the State Board of Agriculture for cause, and it is invalid after August 31, 1922, and does not include nursery stock not grown on above named premises unless such stock is covered by certificate of a State or Government officer and accepted by the State Board of Agriculture.

WESLEY WEBB, Inspector.
Bunttings’ Nurseries, Selbyville, Delaware

Our packing house where our trees are carefully graded and packed

**Read Carefully Before Ordering**

**ORDERS.** Orders should be sent in just as soon as possible after receiving catalogue. By placing order early you are more certain of getting the varieties wanted, as late in the season we are usually sold out of some of the varieties. If ordered early we can reserve the stock until you want it shipped. We acknowledge receipt of all orders promptly.

**SHIPPING SEASON.**—We begin filling orders about October 15th and continue digging and shipping during the entire fall, winter and spring until May 16th to 15th. We are sometimes delayed in January, February and the early part of March by freezing weather, but usually able to ship most of the time during these months. Nursery stock is successfully planted any time during winter months that ground is not hard frozen. In freezing weather the roots should be well protected in handling and not exposed to frost, however.

**PACKING.**—We make no extra charge for boxing and packing, all stock is delivered f. o. b. train at prices quoted in this catalog. We use damp moss in packing all stock, which insures safe delivery.

**SPECIFIED DATE OF SHIPPING.**—We want our customers, if possible when ordering to state the date they wish their orders shipped and we will always ship on that date when possible, but cannot guarantee it, for instance, during autumn and spring we have at times stormy weather, and during winter months the soil is often frozen for a few days at a time, for these and other reasons beyond our control we cannot guarantee to ship on the specified date. We are always ready and do get right after filling your orders at the earliest moment possible, when weather conditions permit man and beast to be out of shelter. Send your order early and state date you wish it shipped. Then we can come pretty near shipping on date mentioned.

**WHEN YOU RECEIVE TWO CATALOGS, Please hand one to your neighbor.**

**EACH RATE:** LESS than 10 trees are sold at the each rate.

1000 RATE: Over 30 trees are sold at the 100 rate price.

1000 RATE: 300 trees (or more) of ONE kind are sold at the 1000 rate; for instance 300 Peach, 300 Apple and 300 Pear will be sold at the 1000 rate.

When making up your order follow these instructions as we cannot sell stock in small numbers for the same prices as for larger numbers. Labor is a heavy item of expense in the Nursery, and every time a different variety of stock is taken up the foreman with his men must move to a different part of the nursery, which is expensive, saying nothing of the extra work in the packing house and office. There is a reason. This is one of the things we would like to do but cannot.

**NOTICE OF SHIPMENT.**—Notice will be sent you when your order has been shipped.

**THE PROPER PLANTING SEASON** is during the months of February, March and April in the Spring, and late October, November and December in Autumn.

**TELEGRAPH OR TELEPHONE US AT SELBYVILLE, DELAWARE.**

**SPECIAL LOW EXPRESS RATES.**—We can ship stock by Express to any part of the country at rates 20 per cent, less than merchandise.

**WE CANNOT GUARANTEE STOCK TO LIVE.**—We guarantee all stock we sell strictly first class and THUS-TO-NAMED dug and packed properly for shipment; our prices compete with other reliable nurserymen, we do not charge a price for a tree, that should it die, we could replace it and then still make a profit. Stock often perishes when it is not properly planted and cultivated, also the severe cold and heavy storms of winter, and drouths of spring and summer, which is liable to occur will sometimes cause the best of stock to perish, which is no fault of ours.

**REFERENCE.**—We refer you to Dunn’s and Bradstreet’s commercial agencies, Balti more Trust Co. of Selbyville; Selbyville National Bank of Selbyville, or any business house in Selbyville.

We accept Liberty Bonds of all issues at face value in payment for Nursery Stock, but no cash discount is allowed when payment is made by bonds. Send bonds by registered mail.
SHIPMENTS.—After we deliver stock to the forwarding companies, and receive their receipt for the shipment in good condition, our responsibility ends. If stock is damaged while in transit, have agent at point of delivery to note such damage on freight or express bill, and present your claim for damage with said agent against forwarding companies. Keep copies of all papers. If adjustment is not made within a reasonable time take the matter up with us, we will endeavor to help you get a prompt adjustment. Transportation conditions recently have been greatly improved, and we are pleased to report, stock again moving to point of delivery without delay.

SUBSTITUTION.—When sold out of a variety of trees or plants we frankly say so and when you allow us to substitute we will send a variety similar to the one ordered, as good or better; as we know the many varieties our substitution, if any, will be to your advantage. Late in the season we are sometimes sold out of some varieties of stock, thus when sending your order it is to your advantage to say whether you may substitute or not, that we may get the order off promptly, before the season is too far advanced for successful planting. If you do not wish us to exercise this right please mark your order sheet plainly NO SUBSTITUTE.

Dear Sir:—

The berry plants that I purchased from you sometime ago are in a fine condition and a fine success I have from them. Please let me state that one man from Ashley, Pa., by the name of James Dergigg, I think this is his name, got an order from another firm one year ago, and was left on his order. So I asked him to give you a chance. He did, and I want to say that he is a pleased man, and there is a number of others that I referred you to.

Let me say one thing more, whenever I can ring the Buntings' Nurseries in I will do so for I have faith in your people. I know that your product is all right.

Now there is a little information that I would like to have: Could a person raise the Everbearing Strawberry plants in a hot house? Can it be done? If it can there is an order awaiting. Let me know at once.

Awaiting an early reply, I remain, as ever,
Yours truly,

June 19th, 1920.

HARVEY DRUMTRA.
Wilkes-Barre, Pa.

Dear Sir:

The berry plants that I purchased from you some time ago are in a fine condition and a fine success I have from them. Please let me state that one man from Ashley, Pa., by the name of James Dergigg, I think this is his name, got an order from another firm one year ago, and was left on his order. So I asked him to give you a chance. He did, and I want to say that he is a pleased man, and there is a number of others that I referred you to.

Let me say one thing more, whenever I can ring the Buntings' Nurseries in I will do so for I have faith in your people. I know that your product is all right.

Now there is a little information that I would like to have: Could a person raise the Everbearing Strawberry plants in a hot house? Can it be done? If it can there is an order awaiting. Let me know at once.

Awaiting an early reply, I remain, as ever,
Yours truly,

June 19th, 1920.

Harvey Drumtra.
Wilkes-Barre, Pa.

Gentlemen:

Are you able to supply me with one hundred peach trees—J. H. Hale variety—for use next spring? Am not particular about the largest trees, merely that they are stock in good shape, and Hale. Trees bought from you five years ago were extremely heavy bearers this year.

Yours very truly,

Oct. 8th, 1920.

L. N. Boston.
LADY CORNEILLE

STRAWBERRIES

We Grow Strawberry Plants by the Millions on Our Own Soil. Selbyville, Delaware, Is the Largest Strawberry Center in the World.

The Strawberry is King of all small fruits. It seems natural for everybody to like Strawberries. There is no crop more profitable than Strawberries, and it does not cost much to get started in the Strawberry business. In our list will be found the standard varieties — the varieties that you can depend upon. We were the first to grow Strawberries in this section of the country; Selbyville, Delaware; the largest Strawberry center in the world is a fact that positively proves that we have the soil and climate to produce the best of Strawberry plants, vigorous, healthy and of the largest producing quality. You will note our prices are reasonable; we only charge a price that pays the expense of growing, digging, packing, etc., and have a living profit remaining. If your order is placed with us we assure you first-class plants, true to name, packed in good condition, and as good as grown anywhere in the country, regardless of price.

Description of Varieties

Writing descriptions is the nurserymen's hardest task, as there are so many varieties that produce wonderfully in some sections of the country, while in other sections they are not so good, thus it is very important that one should be familiar with the variety before planting extensively of it. In such cases if you describe the soil to the Nurseryman he can be useful. We have discarded several varieties of strawberry plants, and are recommending varieties which seem to be successful over a large part of the country. When writing descriptions of strawberry plants we always make same as short as possible, and to the point. When possible we always advise where each variety is best adapted to the soils and climate in the many sections of the country.

SAMPLE. (Imperfect). Medium late. Extensively planted throughout the entire North Middle and Western States. is not worth planting south of Virginia on account of rust. For its section it is unsurpassed. Fruit is very large and well made up, firm enough for long distance shipments. A very heavy cropper. This is one of the varieties Nurserymen seldom grow enough plants to supply the demand.

AROMA. (Perfect). Late. One of the best late varieties. Plants are large, very vigorous and healthy; fruit is large to very large, roundish of a bright glossy red, of excellent quality and one of the most productive late varieties. Can always be depended on bearing a large crop of first class fruit. Planted in all sections of the country, most extensively planted in the middle West and tropical sections of the country.
**KLONDYKE.**—One of the best paying early varieties.

KLONDYKE.—Berries uniform in shape and size, dark red, mild and delicious, very handsome. Plants make a remarkable growth, are tall and compact, stalks strong, leaves light green, makes abundant runners and an unusual number of crowns. One of the very best paying early varieties, and is, such a good shipper that its appearance in the market causes it to be eagerly bought by those who are ready to pay good prices for fancy fruit. Plant Klondyke for more trade and more profit. A good variety for the South and Pacific Coast States.

BRANDYWINE. (Perfect). Medium late. Fruit extra large and very firm, has unequalled shipping qualities, a very heavy cropper, it is a standard variety the country over. More extensively planted in the tropical climates, bearing a heavy crop of No. 1 fruit anywhere strawberries will grow. You would like Brandywine.

KELLOGG'S PREMIER. (Perfect). Early to late. Noted for its long fruiting season and unsurpassed shipping qualities. Ripens with the early varieties and continues fruiting until the late varieties come in. It is adapted to all sections of the country. No weakness of any kind. Fruit is large to very large and holds size well through its ripening season. Foliage is smooth, bright and clean. A good plant maker. We believe Premier is the most extensively planted variety of strawberries at this time. We consider it the very best variety for either home use or market, excepting no variety. Cannot recommend it any higher. Include some Premiers in your order this spring.

NICK OHMER. (Perfect). Late. Fruit glossy red, globular in shape and with bright large green caps which show them up well in the markets. Produces a very heavy crop of fruit, plants strong growers. Adapted to all parts of the country. Most extensively planted in Southern California and Florida, at which places we ship the majority of our plants each year. You cannot go wrong in planting Nick Ohmer.

HAVERLAND. (Imperfect). Mid-season. Fruit is very large and conical; plants strong growers. An old standard variety that has been tested for over a generation, and is just as good today as it ever was. Succeeds over a great extent of the country.

SUCCESS. (Perfect). Mid-season. Makes a yield on any soil that will produce strawberries of any kind. The only fault of Success is that it is not a firm enough for very long distance shipping, a very good one to plant for home use, or local markets, we might add that it can't be surpassed for this purpose. Fruit is large to extra large, bright scarlet color; flavor is mild sweet and rich.

LUPTON LATE. (Perfect). Late. A very good mid-season to late variety, a seedling of the Gandy and season of ripening about four days ahead of the Gandy, which is a good point, you get some fancy late berries on the market before the full late crop gets on. This variety originated in New Jersey several years ago and is now one of the leaders in that State. The plants are healthy, large and long lived. Foliage heavy, dark green, fruit stocks short, berries set under the leaves and well protected; flower perfect, berry large, bright red, and doesn't turn dark after being picked. Has proven a great success so far wherever it has been planted. It sells for the highest market prices and is especially recommended by commission merchants for long distant shipment on account of its firmness and good keeping qualities.

MARSHALL. An old standard variety, and very extensively planted. Berries very large and attractive in appearance. One of the many varieties which Nurserymen seldom produce enough plants to supply the demand.

DR. BURRILL. Very similar to Senator Dunlap, possibly a more vigorous and heavier cropper. It bears well, is a good shipper and good keeper—excellent for canning and very delicious to eat on the table. The blossoms are perfect and its long blooming season makes it good for planting with imperfect flowering sorts.
CAMPBELL’S EARLY. This is a new extra-early variety of great promise. In New Jersey where it originated the growers are very enthusiastic over it. A leading grower says: “Campbell’s Early comes in ahead of them all, growing from such large, healthy plants with a light green, waxy, upright foliage protecting the great crop of large, beautiful, rich red berries. They have a beautiful green calyx and come second to none in flavor. One of the most wonderful features of the Campbell’s Early is that practically all grow to full size and no knotty, ill-shaped berries: they ripen perfectly all over with no green ends. They are fine, vigorous growers, have perfect blossoms, and will retain their firmness in carrying to distant markets.

CHESAPEAKE. (Perfect). Late. Ripens a little earlier than Gandy. Has a beautiful appearance, extra large, even in shape and uniform in size. Plants are strong growers, healthy dark green in color, rich and vigorous, no rust, no disease, in fact no weakness of any kind. Chesapeake is a shy plant maker and should be planted in rich springy land for best results. This is a good one and is well known and extensively planted, wherever strawberries are grown.

GLEN MARY. Probably no variety of strawberries will produce more quarts per acre than Glen Mary. It is very popular throughout the northern half of the United States and especially in Pennsylvania, New York and New England. Firm enough for distant shipping. It is of handsome appearance and good quality. The fruit is of large size and dark red in color with prominent seeds of bright yellow. The meat is so rich and juicy and of such high flavor that, when once eaten, more is wanted. Glen Mary is a strong grower which makes large, healthy plants, with an abundance of dark green foliage. Not only is Glen Mary a heavy cropper, but the berries are of such quality and attractiveness that they bring top prices on the market.

PARSONS BEAUTY.—(Perfect). Mid-season. One that may be depended upon to produce a large crop of fruit every season. The plants are splendid growers, on any soil that will grow strawberries, and without any sign of disease. The fruit is large, conical, uniform shape, dark red and fair quality, for long distance shipments. Largely planted by commercial growers for the reason of its vigor and extreme productiveness. Does well in any section of the country. A strong pollinizer, and a good one to plant with imperfect blooming varieties.

JOE JOHNSON (BIG JOE).—(Perfect). Late. Ripens with Chesapeake, about three days before Gandy. Fruit is firm and of large size, has a good flavor, no green tips, wonderfully productive; plants are strong growers, thrive on any soil that will produce strawberries. We consider this variety equal to Chesapeake as a money maker, and in many instances better owing to its thriving in so great a variety of soils. If you are not growing Joe, plant heavily of them this spring. You will not be disappointed with the results.

STEVE N S LATE CHAMPION. (Perfect) Late. Extensively planted throughout the northern states. Plants strong and vigorous which yield heavy crops of fruit of large size and good quality. Does not do well South owing to rust, and fruit for some reason in the Southern states is too soft for distance shipping.

SENATOR DUNLAP.—(Perfect). Early Mid-season. A reliable market berry. One that succeeds in all parts of the country, and is the most extensively planted variety in many sections of the west. Very productive. Fruit is medium to large, very firm and attractive. Always sells for top prices.
A partial view of one of our strawberry plant fields. These plants are growing in new-land and have plenty of fibrous roots full of vitality.

**MASCOT.** (Perfect). Late. Begins ripening about three days after Gandy first begins ripening. Fruit is very firm, and as large as any we know of. We have extensively planted this variety for fruiting purposes. It is a good one and has come to stay. Bears big crops of big, firm, red berries. Extensively planted in all strawberry section of the country.

**TENNESSEE PROLIFIC.** (Perfect). Mid-season. A well known standard variety. Like Parsons Beauty, succeeds over a great extent of the country. Fruit is very large, bright red, ordinary firm. One of the heaviest croppers we know. Plants are strong and vigorous and will thrive in any soil that other varieties will grow.

**GANDY.** (Imperfect). Late. For this section, and many other sections of the country, this is one of the best late varieties. Probably no higher compliment could be paid to this variety than the fact that all other late varieties are compared with it. For best results it should be planted in black swampy land, well drained, or if this is not possible, in springy land with some clay in its make-up, this variety should not be planted on high sandy land. Here at Selbyville, Del., the largest strawberry center in the world fully 3-4 of the plants grown are Gandy, and the growing of this variety of strawberries has lifted more mortgages off farms than any other crop planted. Fruit is extremely large, fine flavor. We have known Gandy to be shipped 400 miles and still look better over fancy local berries. The perfect shape of the berries and the large bright green caps make the berries very beautiful and attractive. Its great shipping qualities enable it to hold this beauty and attractiveness until it gets to market.

**EARLY JERSEY GIANT.** (Perfect). Medium early. Produced by Dr. Walter Van Fleet of New Jersey, and the best one of a number of the hybrids introduced by him. Fruit is large, brilliant crimson, conical with pointed tips, which ripens evenly all over. Has large green caps which draws immediate attention. Th plants are strong growers, with an abundance of long fibrous roots, which makes it a great drought resister. Fruit is firm enough to ship well.

**NEW YORK.** (Perfect). Mid-season. This is the strawberry that was awarded a prize of $100.00 which was offered for the best and largest berry on exhibition. Plants are large and healthy. Fruit extremely large, well colored. Noted for producing extra large crops of big red strawberries, on very poor soils. Extensively planted all over the northern section of this country for market purposes and family use. We doubt if there is a better mid-season variety for the northern states. This berry is so popular it has been introduced under many different names. We have heard of some good reports of New York in the southern sections of the country, but do not recommend planting New York south of Delaware and Maryland, fruit is not firm in southern localities.

**PRIDE OF MICHIGAN.**—Same as New York.

**HUNDRED DOLLAR.**—Same as New York.

**DORIAN.**—Same as New York.

**McKINLEY.**—Same as New York.

**BARKLEY.**—Same as New York.

**UNCLE JIM.**—Same as New York.

**OSWEGO.**—Same as New York.

**RYCKMAN.**—Same as New York.

**CORSICAN.**—Same as New York.

**JUMBO.**—Same as New York.

**WM. BELT.** (Perfect). Mid-season to Late. Produces a large berry of extraordinary beauty and quality. The Wm. Belt is a variety of which many of the best table varieties are compared with as to quality. Has been the leading berry for table use in thousands of homes for many years and still grows in demand. This is an ideal strawberry for market gardeners as well as for home use. As to productiveness it is all that can be desired. It is one of the best pollenizers for imperfect sorts of its season. Plants strong and make runners freely. It is a very heavy and abundant bearer of fine appearing fruit of the very best quality and we find it much superior to many of the more lauded new sorts.
Buntings’ Nurseries, Selbyville, Delaware

One of our strawberry plant fields

HOWARD 17. (Perfect) This is a new variety introduced a few years ago, and, we understand it is Kellogg’s Premier. We cannot see any difference in the two varieties growing here on our grounds.

BURACH.—(Imperfect). Mid-season. An old standard variety well known the country over. Fruit is large, bright red; foliage very strong, of dark green color. Very productive.

EARLY OZARK.—(Perfect). Extra early. The berries of good size, round in shape, quality fine, good shipper, and the most heavy cropper of the extra early sorts. Plants are very strong and healthy, color dark green. It has proven a great success wherever it has been planted, and many large strawberry sections of the country are planting Ozark altogether for the early market berry. Ozark is a perfect flowering sort, very strong in pollen, which makes it a valuable variety to plant with the imperfect varieties. We strongly recommend planting Ozark.

LADY CORNEILLE. (Perfect) For California, the middle and southern states we recommend Lady Corneille for the market variety, in fact more than half of our plants of this variety are sent into California each year. The plant is a strong grower and does well on almost any soil, the fruit is dark red in color, large conical in shape, good size, and wonderful shipping qualities, this is one reason the California growers plant it, they report to us that fruit will carry from California to New York in excellent condition. It is very productive and now is largely planted in all strawberry sections of the country. If you are not growing Lady Corneille, plant heavily of them this spring.

MISSIONARY. A variety that is proving very popular all through the South. It is a strong grower, making plants freely; early to mature, coming in right after Excelsior, and very productive. The berries are well colored, firm, large, and hold their size well throughout the season. It is a good shipper, having a tough skin not easily broken by handling.

FLOWERING SHRUBS
(Also see page 21)

SPIREA BILLARDI. Flowers borne on dense panicles, and of a delicate pink color. Plant is hardy, growth spirilike, narrow, attaining a height of about 6 feet when fully grown. Flowers during July, August and September.

SPIREA OULIFOLIA: (nine-bark). White flowers borne in flat clusters, old flower heads turn red and make a striking variety of colors. It is very popular.

YUCCA FILIMENTOSA (Adams Needle). A flowering grass that might be classed as an Evergreen, as it is always green. Flowers white in July. Grows upright to a height of about 2 to 3 feet.

SPIREA THUNBERGII: Looks like a mass of snow early in April before leaves appear, owing to its blooming a great number of pure-white flowers. Very popular owing to time of blooming.

SWEET-SCENTED SHRUB: (calycanthus) Foliage is rich and flowers are of a rare chocolate color having a delightful odor. One of the most desirable shrubs.

CRAPE MYRTLE: Blooms in great profusion of crape shaped flowers which form circular balls of flowers on the plants. We grow the white and pink ones.

HYACINTHS.
Planted only during Autumn.
We have a complete assortment, of the many varieties. See price list.

TULIPS.
Complete assortment. See price list.
Fall or Everbearing Strawberries

Fall or Everbearing Strawberries are no longer an experiment or novelty. They are being extensively planted for market purposes as well as for home use. Except the labor of keeping the blossoms off the first year until about the 1st to middle of July, the culture directions are not different than that of the June-bearing sorts, yet it is not strictly necessary to remove all the blossoms until July 15th, but if this is done you will have a heavier crop of berries during August, September, October and the early part of November. Everbearing strawberries are a paying investment, they bear a large crop of fruit the summer and fall, following the spring they are planted, they also bear a heavy crop of fruit the following spring at the time June-bearing varieties are in their height of fruiting, and then bring another light crop the following fall. NO BETTER COMPLIMENT COULD BE PAID THIS STRAIN OF STRAWBERRIES THAN THE FACT THAT NURSERYMEN HAVE NEVER ANY YEAR YET BEEN ABLE TO GROW ENOUGH PLANTS OF THE EVERBEARING SORTS TO SUPPLY THE DEMAND.

**PROGRESSIVE.** A wonderful fall-bearing strawberry and considered the best by many growers. The spring-set plants not only produce a big crop of berries the same season, but the runner plants commence to bear fruit as soon as set, and quite often you will find a runner plant full of blossoms and berries before it has made any roots, and in this way Progressive yields a crop of fruit the first year that is truly wonderful. The fruit of the Progressive is of good size, smooth, of good color and appearance. The plant is a good grower and healthy.

**SUPERB.** Many growers consider the Superb the best ever-bearing variety, but we find the Progressive ahead of Superb here in Delaware. The Superb is not as good a grower as Progressive, but is ideal for the hill system of growing; neither does it produce as many berries here with us, but the berries are of large size and very handsome. The Superb is not only a good fall-bearing sort, but one of the most profitable varieties to plant for a regular crop.
PEACH TREES

We are offering only a limited number of varieties, ones that you can depend on giving you a good crop of fruit, we do not think it worth while to propagate a large number of varieties, when a few of the best varieties will make more money for our customers. The peach crop is quite sure if you give your trees proper attention. To succeed in growing fruit, first of all plant good trees, give them correct pruning, frequent spraying, proper cultivation, good fertilizing, careful picking and attractive packing, by so doing your orchard will give you profit year after year. Our peach trees are budded with buds cut from our bearing orchards, we know they are true-to-name. For spraying instructions, consult your County Agent or Experiment station in your State.

**Iron Mountain.** Ripens September 1st. Freestone. Fruit is of large size, color white. A regular bearer.

**Carmen.** A freestone when fully ripe. Ripens July 15th to August 1st. Fruit is large, rich, creamy white and pink. Very hardy. The best one for early market.

**J. H. Hale.** One of the best sorts for market or garden. Fruit is very large, round, quality excellent. Skin yellow finely colored, flesh yellow, sweet and melting. Ripens just before the Elberta. A very good one.

**Greensboro.** Ripens here from June 25th to July 10th. Large white peach with red cheek, flesh rich and melting; tree a strong grower. Freestone.

**Belle of Georgia.** Ripens early in August. Freestone. Holds the same prominent position among the white peaches as Elberta does among the yellow. Very productive of large, oblong, creamy white fruit, with red blush next to the sun.

**Ray.** Tree a fine grower. Fruit ripens early in August, of large size, very productive, white with red blush. Freestone. A very good one.

**Elberta.** Ripens in Delaware August 15th. Very large Freestone. Skin golden yellow, with fine red cheek, flesh is yellow, juicy and extremely high flavored. A great success the country over.

**Hiley.** Ripens about a week before the Belle of Georgia, also a seedling of the Belle. Tree very hardy; a large creamy white peach with rich blush on sunny side; a long keeper and good shipper. Freestone.

**White Heath Cling.** Fruit extra large and roundish, flesh white and exceedingly juicy. A fine late peach for canning purposes; will keep a long time after being taken from the tree. Ripens September 14th to 20th.

**Crawford’s Early.** Freestone. Large, oblong, yellow with deep red cheek; flesh yellow, juicy and rich, excellent flavor.

**Mayflower.** Trees are thrifty. Fruit good size, red all over, very firm. Ripens June 25th to July 4th.

**Crawford’s Late.** Ripens with Chair Choice. Freestone. High quality and very large size; flesh deep yellow; skin yellow with a broad dark red cheek.

**Red Georgia.** Tree a strong grower. Flesh of fruit is blood red. Fine for pickling. Ripens September 29th to October 1st. Perfect clingstone.
APPLE TREES

The price of apples is always high and it seems impossible for growers to supply the demand. It is the only fruit grown in the temperate zone that is matured at any season of the year without resorting to artificial means of preservation. The apple is the healthiest of all fruits. Its numerous seasons of ripening extend throughout the summer and autumn months, they can also be had during the winter months in their natural form.

Staymen's Winesap. November to April, but keeps well to May. A profitable sort to grow for market, and the best for home use. Large in size, fine appearance, good flavor, juicy and crisp, color red. A great success.

Grimes Golden. Very large, skin golden yellow; flesh tender and crisp. A very good fall apple. September to January. Grown in all sections of the country.

York Imperial. A very good one, trees come into bearing early, and bears a good crop each year. Skin bright yellow covered with bright red and striped, very large. Suitable to any part of the country.

Jonathan. Most beautiful of all apples. Season November to April. Fruit medium to large, roundish, yellow nearly covered with red, fine grained, tender and finely flavored.

Winesap. Medium to large size. Red color; flesh yellow, firm, crisp, with rich high flavor; quality very good. November to May.

We accept Liberty Bonds of all issues at face value in payment for Nursery Stock, but no cash discount is allowed when payment is made by bonds. Send bonds by registered mail.
Apple trees coming 2-year old. Some of the stock we are offering this fall

**Yellow Transparent.** Fruit medium to large with a brilliant waxy skin; flesh is tender, crisp and juicy, color yellow. Summer apple growing offers a large profit to the fruit grower, and the Yellow Transparent is the variety to plant.

**Baldwin.** Large, roundish, skin deep red; flesh juicy, sub-acid, good flavor; very vigorous and productive. The best all-round winter apple for New England and Northern States. Splendid keeper. December to March.

**Red Astrachan.** Large, nearly covered with deep crimson, juicy, rich, acid, beautiful. Tree a vigorous grower. A good bearer. August.

**Tolman’s Sweet.** A splendid winter sweet apple. Color yellow, good cooking apple, bears when young.

**Wealthy.** Fall. Almost solid red. Flesh white, tender, crisp, juicy fine grained. A good keeper.

**Delicious.** Winter apple. Keeps well, color red and yellow, fine grained, and slightly juicy, flavor slightly acid, but very good. A good apple for either home use or market.

**Sweet Bough.** A fine summer apple. Yellow with blushed. Very sweet.

**Winter Banana.** Size large, golden yellow, and beautifully shaded with bright crimson red. Flesh lemon yellow, fine grained, sub-acid, rich, aromatic flavor. Season November to January.

**Malden Blush.** One of the most beautiful; pale lemon with crimson cheek; flesh white, tender and crisp, October.

**Northern Spy.** Large, bright, light red and yellow. Flesh juicy, rich, crisp, tender, aromatic, of good flavor. Tree strong grower. November to March.

**Wolf River.** Winter. Exceedingly large and handsome. Skin is a bright yellow, mottled and blushed with deep red. Remarkably good shipper.

**Early Harvest.** Ripens in August. Medium size; pale yellow, fine flavor. Tree a moderate grower and a good bearer.

**McIntosh.** Medium size, nearly covered with a bright red; flesh waxy yellow, tender, juicy, sub-acid. October to February.

**Spitzenburg.** Winter. Medium size, round; dark red almost all over; firm, crisp, sub-acid. One of the very richest flavored of all apples.

**Williams Early Red.** Among the earliest to ripen, and the largest of all early apples, a better name for it is “Big Red Apple’. Flesh is white, juicy and slightly tart, tender and crisp. A very good one, like Transparent, bears heavily on young trees.

**Duchess.** Very hardy grower, fruit medium size, red striped, the bright red is shaded with crimson. A very good early apple.

**Paragon.** (Mammoth Black Twig.) One of the very best winter apples. Extra large in size, skin smooth, waxy, yellowish covered with red. Quality excellent. Will keep until summer apples come.

**Hyslop.** (Crab Apple). Large, handsome, crimson, splashed with dark red. Very prolific. September.
Looking across a block of our 1-year old grape vines

**CHERRY TREES**

**SWEET CHERRIES**

- **Black Tartarian.** Black; very large, rich and sweet. Productive. Ripens last of June.
- **Governor Wood.** Yellow with red cheek; tender. Rich, delicious, very fine, large, roundish, depresses at stem; productive, early.
- **Schmidt's Bigarreau.** Flesh tender, juicy, good flavor. Mahogany color.
- **Napolean.** Yellow tinged with red. Good shipper.

**SOUR CHERRIES**

- **Montmorency.** Large, bright shining red; acid, hardy and productive. Late.
- **Early Richmond.** Medium to large. Dark red. Juicy, good flavor. June.
- **English Morello.** Large size. Color dark red, quality very good. Late.

**YELLOW SPANISH:** Ripens early in June. Fruit large, color yellow. Tree vigorous grower.

**PLUM TREES**

- **Green Gage.** Skin pale green. Excellent. An old standard variety.
- **German Prune.** Dark purple or blue. Juicy, rich, of best quality. September.
- **Shropshire Damson.** Medium size fruit, produced in thick clusters or groups. Tree a strong grower, and very productive of dark purple colored plums. October.

**SOUR CHERRIES**

- **Red June.** Ripens first of August, fruit large, flesh light lemon yellow, half cling; slightly sub-acid and of good quality. Very productive.
- **Burbank.** Fruit very large; dark violet red; flesh juicy and pleasant. Ripens middle of August. Productive.
- **Abundance.** Fruit very large and showy; flesh light yellow, exceedingly juicy, tender and sweet. A good market variety. July.

---

**Dear Sirs:—**

My trees (order No. 5177) reached me on Friday, the 25th, in very good condition.

Sincerely,

GEO. W. GREEN,
New Jersey.

**Dear Sirs:—**

Trees and shrubbery reached us in perfect condition. Am very much pleased.

Yours,

WM. H. DIETRICH,
Camden, N. J.

We accept Liberty Bonds of all issues at face value in payment for Nursery Stock, but no cash discount is allowed when payment is made by bonds.

When sending your bonds to us, be sure to send them by registered mail.
Grape vines growing in our nursery. They are coming 1-year old. Photographed Sept. 1, 1920. If you are in the market for grape vines believe we can please you.

**PEAR TREES**

**Bartlett.** Season last of August to September 15th. Good strong grower, flesh is white, fine grained, luscious, large and buttery, has a rich, melting flavor and very sweet.

**Clapps Favorite.** Summer. Fruit large, of yellow lemon color, spotted with brown dots; flesh fine, rich and sweet. A very good one.

**Kieffer.** One of the most profitable market pears. It is an abundant and regular bearer. Good shipper. Fruit large, color yellow with red cheek. Will produce ten bushels of pears to the tree when ten years old, begins fruiting successfully when three years old. Season October.

**Seckel.** Medium size, skin rich, yellowish brown with deep brownish red cheek when fully ripe; flesh very fine grained, sweet, exceedingly juicy, melting, buttery. One of the richest and highest flavored pears known. Summer.

**QUINCE TREES.**

**Champion.** Tree strong grower, produces a good crop every year. Fruit is large and of good quality. Cooks as tender as an apple. October.

**Bourgeat.** Large, golden yellow, fine quality, tree healthy, a good one.

**ORANGE.** Good size. Heavy bearer. Flesh orange yellow.

**APRICOT TREES.**

**Acme.** Large size, orange skin, and flesh. The best Apricot. July.
GRAPE VINES

No home should be without grapes. They are planted anywhere and everywhere, to trail on fences, sides of houses, etc. Grapes when planted in such manner grow without any care. Even people who live in crowded towns and cities can grow grapes. They are also a paying crop to grow for market.

Concord. The most popular black variety of grapes in America. The bunch is large, shouldered and compact, skin is tender, flesh juicy and sweet. Succeeds well all parts of the country. Extremely productive, produces abundantly in the nursery row on three year vines.

Niagara. Fruit is white, juicy, tender and melting, sweet: very productive. The very best white grape.

Worden. A strong, vigorous vine; fruit is blue, large compact. Flesh pulpy, with rich vigorous flavor. Fine for table or wine.

BRIGHTON RED: One of the earliest to ripen. Bunch large and well formed. Excellent flavor and quality. A very good shipper.

RHUBARB OR PIE PLANT.

Myatts Linneasius. Early, large, tender and of good quality.

Dear Sirs:—
Received my order and thank you for such prompt shipment, and my plants look very nice, and was packed lovely for shipment.
Yours truly,
W. S. MATT,
Pennsylvania.

May 12th, 1920.

Dear Sirs:—
I have received the shade trees and fruit trees in good condition, and I was very much pleased with your stock, and next spring will order more. I remain,
Yours respectfully,
FRANCES COREY,
Pennsylvania.

May 18th, 1920.
DOWNING—Very large with unsurpassed quality.

GOOSEBERRIES

**Josselyn.** Fruit some larger than Downing, but not quite so productive, quality very good, largely planted.

**Downing.** Very large, quality unsurpassed. Bush of vigorous growth and free from disease.

**HOUGHTON:** Plants are extremely hardy and healthy, very seldom fails to produce a bumper crop. The fruits are of medium size and best quality.

CURRANTS

**Fay's Prolific.** Berries large and rather dark red, juicy and sweet, a good market variety.

**Wilder.** Berries large to very large, bright red, with a mild flavor. Very hardy grower, and heavy cropper, considered by many the best.

DEWBERRIES

**Lucretia.** Extremely productive of berries as large as the largest Blackberries. Ripens 2 weeks before Blackberries. Dewberries are same as blackberries, except vines of Dewberries run on the ground while blackberry canes grow up.

There is big money made in growing dewberries.

IMPORTANT.

When trees are received and you are not ready to plant, bed them out until you are ready. When doing this dig a trench deep enough to admit all roots, and cover with mellow earth, extending well up the bodies of the trees.
EVERY GARDEN SHOULD HAVE BLACKBERRIES IN IT.

BLACKBERRIES

**Eldorado.** Jet Black. Berries are large to very large, of finest quality. Plants are vigorous and seldom fail to produce a bumper crop.

**Snyder.** (Black). Fruit large, quality good. Plants strong growers. An old favorite.

RASPBERRIES

**St. Regis.** (Everbearing). Ripens with the earliest, and continues on young canes until Autumn. Color red, flesh firm and meaty. Largely planted.

**Cuthbert.** (Red). The best red Raspberry. Heavy yielder of large solid fruit. Plant is a very vigorous grower. Fine for market and table use.

**Plum Farmer.** (Black). The largest of all black Raspberries. Quality of fruit unsurpassed. Good for both home use and market.

**CUMBERLAND.** Fruit jet black. Ripens mid-season. Plants hardy and of medium to large fruit of best quality.

**Russian.** Tree is a splendid grower, soon attains good size, fruit very heavy regularly, a good crop of the most delicious Mulberries. Trees bear when quite young, beginning the second year in the Nursery row.

MULBERRIES

**English Walnut.** Well known, justly popular, very hardy, will stand the extreme cold, produces abundantly.

**Pecan.** Well known, justly popular. Very large nuts, 50 to the lb.

**Japan Walnut.** Very hardy, makes quick growth, bears abundantly when young, produces large nuts sweeter than other kind; the best chestnut in existence.

NUT TREES

Nut trees are valuable, useful and ornamental. No home should be without them. They are valuable as shade and ornamental trees, as well as the nuts they produce.

**Butternut.** Tree makes very rapid growth, and bears heavily of large, longish nuts. Very pleasing for its sweet, oily, nutritious kernel.

**American Sweet Chestnut.** Flowers in June. Nuts sweeter than other kind; the best chestnut in existence.

THE VARIETIES OF PEAR, PLUM, CHERRY AND QUINCE TREES WE OFFER ARE SELECTED VARIETIES, THEY ARE THE BEST BY TEST OF A NUMBER OF VARIETIES. YOU WILL BE PLEASED WITH THE FRUIT THEY PRODUCE.
ASPARAGUS ROOTS

A SPARAGUS is one of the most profitable crops grown. It is in great demand in all markets always selling for very high prices. The demand is much greater than the supply as asparagus has not been extensively planted as many other farm products. It will thrive in all localities and on any soil that will produce general farm crops. To have it real early it should be planted on light soil. The sprouts are not usually cut for market until the second year after planting, except to mow down the canes in the fall or spring. Plant from 4 to 5 inches deep covering with only 3 inches of soil at first, and cover the remainder as the plants grow. The rows should be 3 feet apart with plants set 1 foot apart in the row. Broadcast about 5 bushels of salt and 300 pounds of Nitrate of Soda to the acre in March and give it a good top-dressing of stable manure in November. The profits from asparagus are wonderful. It is ready for market in April and May and the income derived from it is especially appreciated at this time of the year. The roots give a splendid crop each year for 20 years. It is successfully planted during March, April and May, also during the fall months.

Palmetto. Of Southern origin. Very large and productive. Most extensively planted of all asparagus.

Conover’s Colossal. An old variety, well known in all localities. Large and makes a rapid growth. Very popular.

Barr’s Mammoth. Early and very large; makes a rapid growth. A general favorite.

Giant Argenteuil. This variety is largely grown in France. Stalks are immense size, rich and tender. Earlier than the other varieties.

Dear sirs: I received my plants last week in fine condition. I got them the same day they arrived at the Express office and planted them at once, and they certainly are starting off nice.

Yours truly, Ross C. Core,
April 16, 1919
Penna.

Gentlemen:—
October 26, 1920.

I received the fall price list sent me, which I thank you for also. When your catalogue comes out, please send me one.

Let me say that the trees that you sold me in the spring of 1918 and 1919 all lived and I am well pleased with them. The trees that I planted in 1918 had a nice lot of fruit on them last spring, but it all dropped off of the trees being young. I expect a good crop of apples next year, 1920. I also expect a lot of peaches. My trees are planted on my place at Maple Shade, N. J. I intended to write you in the spring of 1919, but neglected to do so. If you care to use my name as a testimonial, you may do so as I am well pleased with my trees.

Wishing you every success in the future, I remain,
Respectfully yours,
WILLIAM GOODWIN.

Dear Sirs:—
I received the strawberry plants and was well pleased with them.
They were in good shape and were very nice. Next spring if all is all right, we will send for some trees and vines. Respectfully yours,
SHERMAN KNAPP,
May 9th, 1920.
Pennsylvania.

Gentlemen:—
Enclosed please find another small order. Your privet, fruit trees and grape vines shipped me last year opened up O. K. Did not lose a tree, vine or plant.
I have nothing but praise for your stock.
Very truly yours,
H. J. CAPEHART.
Feb. 4th, 1920.
West Virginia.
SHADE AND ORNAMENTAL TREES

Compare a home with shade trees, Evergreens, Flowering shrubs, Roses, etc., planted on the lawn, with one barren of trees, etc., bring these two pictures to your mind, which home would you prefer. The one beautified by the Trees, Evergreens, Shrubs, etc., "Of course!" The Evergreens and Shrubs make the home more attractive, while the Shade trees help make up this appearance, and keep the lawn and dwelling both cool during the hot summer days.

Such plantings are never forgotten by people who in childhood played under the trees. DUTY TO YOUR FAMILY URGES YOU TO PLANT.

**Norway Maple.** A large, handsome tree of spreading, rounded form, with broad, deep green foliage. Very hardy, and extensively planted.

**Silver Maple.** Produces a quick shade. The leaves on top are light green, underneath the leaves same shade as bright silver, and as the sweet summer breeze approaches them, the silver and green flashes are very attractive. Extensively planted.

**Catalpa Speciosa.** Very fast grower, makes a shade within 2 to 3 years. Leaves are very large, many measuring 5 inches across, extensively planted where a quick shade is desired. Valuable for timber, fence posts, railroad ties, etc. Flowers white in summer.

**American Elm.** A fine wide spreading tree, of very dark green leaves, very extensively planted, and considered by many the best shade tree in the world. Entirely hardy and succeeds in any location.

**Lombardy Poplar.** Makes fast growth, does not spread, a tall spire-like tree, altogether planted at the entrance to drive ways, and to mark boundary lines. Unsurpassed for its purpose.

**Schwedleri Maple.** Has three changes of dress in a season. Spring, purple and crimson, summer dark green, autumn brown and red. For lawn planting it has no equal for beauty. Largely planted by those who want something extra.

We accept Liberty Bonds of all issues at face value in payment for Nursery Stock, but no cash discount is allowed when payment is made by bonds. Send bonds by registered mail.
NORWAY MAPLE.

Japan Blood Red Maple. Leaves extremely bright red, also bark of the tree is red. Grows in shrub form, not for shade. Unquestionably as an ornament for the lawn it is without an equal.

Catalpa Bungeii. See picture. A pleasing lawn tree of formal appearance, no lawn is complete without this tree. Dwarf habit of growing.

NORWAY SPRUCE

All evergreens balled and burlapped for shipment. Do not remove same when planting.

Oriental Plane. Has a very wide round topped head, thick branches, rapid grower. A good one for either street or lawn planting.

WEEPING TREES

Wisconsin Weeping Willow. Forms a large round headed tree, one of the most elegant of all weeping or pendulous trees. Will thrive in any locality, you would like some of these trees on your grounds.

Purple Rivers Beech. A blood-leaved tree, attractive for lawn planting, retains its foliage through the winter.

Cut Leaf Weeping Birch. One of the most remarkable and beautiful trees for the lawn. Famed for its beauty and graceful habit of growing.

Mulberry Teas Weeping. This is a valuable tree for the lawn, is wonderfully ornamental, and fruits every year a heavy crop of the most delicious mulberries, fruits heavily on young trees the second year after transplanting. It is truly an ornamental and fruit tree combined.
EVERGREENS

Evergreens are valuable trees to plant on your grounds. During summer evergreens are as attractive as other trees, but not until the Winter days approach us is the Evergreen so much admired, they are never quite so beautiful as when branches are bowed with banks of white snow. A few Evergreens planted on your grounds will also create warmth and save fuel.

All evergreens are balled and burlapped for shipment. Do not remove same when planting, before planting soak this ball thoroughly in water, cutting the tying cords, plant with ball intact. Water thoroughly for the first days if soil is dry.

Koster's Blue Spruce. Foliage intense silvery blue. The best of all evergreens.

American Arborvitae. (Thuja Occidentalis). Rather dwarf habit of growing. Its foliage and leaves are flat instead of needle like and sets on edge, color bright green. One of the most extensively planted of all Evergreens. Used as specimens for the lawn, also extensively planted for hedges and screens to break the force of winter winds. Fast grower for the first four years, afterwards dwarf habit of growing.

Retinospora Compact Cypress. (Compacta). Dwarf habit of growing; very compact, green color, fine for formal use on planting at base of house.

Japanese Yew. (T. Cuspidata). Dwarf dense habit of growing, very hardy, the best of all of the yews.

Irish Juniper. The trees form low, dense cones of silvery green. No lawn is complete without at least one of these trees.

Savin Juniper. (Subina). Low growing, very dwarf. Color of foliage dark green, very desirable, never gets large.

Dwarf Mountain Pine. (Mugho). Very admirable in all evergreen plantings. Dwarf, slow, compact and neat habit of growing, very hardy, foliage dark green, never grows high.

RETIOSPOR: (Sequarrosa). Foliage silvery blue. Stands clipping when used in hedges or for formal specimen.

Douglas Fir. Very good. Foliage fine compact and attractive.

Boxwood. (Suffruticosa). A very low growing variety, used for window boxes and edgings around beds of shrubbery or along walks, etc.

Boxwood. (Sempervirens). Specially desired for planting as individual specimens on lawns or in tubs. Trimmed as pyramidal form.

Scotch Pine. (Sylvestrus). Foliage bluesh green, very neat in growth, desirable in all evergreen plantings.

KOSTER'S BLUE SPRUCE
One of our strawberry plant fields

**HOWARD 17.** (Perfect) This is a new variety introduced a few years ago, and, we understand it is Kelloggs Premier. We cannot see any difference in the two varieties growing here on our grounds.

**BUBACH.—** (Imperfect). Mid-season. An old standard variety well known the country over. Fruit is large, bright red; foliage very strong, of dark green color. Very productive.

**EARLY OZARK.—** (Perfect). Extra early. The berries of good size, round in shape, quality fine, good shipper, and the most heavy cropper of the extra early sorts. Plants are very strong and healthy, color dark green. It has proven a great success wherever it has been planted, and many large strawberry sections of the country are planting Ozark altogether for the early market berry. Ozark is a perfect flowering sort, very strong in pollen, which makes it a valuable variety to plant with the imperfect varieties. We strongly recommend planting Ozark.

**LADY CORNELLIE.** (Perfect) For California, the middle and southern states we recommend Lady Corneille for the market variety, in fact more than half of our plants of this variety are sent into California each year. The plant is a strong grower and does well on almost any soil, the fruit is dark red in color, large conical in shape, good size, and wonderful shipping qualities, this is one reason the California growers plant it, they report to us that fruit will carry from California to New York in excellent condition. It is very productive and now is largely planted in all strawberry sections of the country. If you are not growing Lady Corneille, plant heavily of them this spring.

**MISSIONARY.** A variety that is proving very popular all through the South. It is a strong grower, making plants freely; early to mature, coming in right after Excelsior, and very productive. The berries are well colored, firm, large, and hold their size well throughout the season. It is a good shipper, having a tough skin not easily broken by handling.

**FLOWERING SHRUBS**

(Also see page 21)

**SPIREA BILLARDI.** Flowers borne on dense panicles, and of a delicate pink color. Plant is hard, growth spirelike, narrow, attaining a height of about 6 feet when fully grown. Flowers during July, August and September.

**SPIREA OPULEFOLIA:** (nine-bark). White flowers borne in flat clusters, old flower heads turn red and make a striking variety of colors. It is very popular.

**YUCCA FILIMENTOSA** (Adams Needle). A flowering grass that might be classed as an Evergreen, as it is always green. Flowers white in July Grows upright to a height of about 2 to 3 feet.

**SPIREA THUNBERGII:** Looks like a mass of snow early in April before leaves appear, owing to its blooming a great number of pure-white flowers. Very popular owing to time of blooming.

**SWEETSCENTED SHRUB:** (calycanthus) Foliage is rich and flowers are of a rare chocolate color having a delightful odor. One of the most desirable shrubs.

**CRABE MYRTLE:** Blooms in great profusion of crape shaped flowers which form circular balls of flowers on the plants. We grow the white and pink ones.

**HYACINTHS.**

Planted only during Autumn. We have a complete assortment, of the many varieties. See price list.

**TULIPS.**

Complete assortment. See price list.
Fall or Everbearing Strawberries

Fall or Everbearing Strawberries are no longer an experiment or novelty. They are being extensively planted for market purposes as well as for home use. Except the labor of keeping the blossoms off the first year until about the 1st to middle of July, the culture directions are not different than that of the June-bearing sorts, yet it is not strictly necessary to remove all the blossoms until July 15th, but if this is done you will have a heavier crop of berries during August, September, October and the early part of November. Everbearing strawberries are a paying investment, they bear a large crop of fruit the summer and fall, following the spring they are planted, they also bear a heavy crop of fruit the following spring at the time June-bearing varieties are in their height of fruiting, and then bring another light crop the following fall. NO BETTER COMPLIMENT COULD BE PAID TO THIS STRAIN OF STRAWBERRIES THAN THE FACT THAT NURSERYMEN HAVE NEVER ANY YEAR YET BEEN ABLE TO GROW ENOUGH PLANTS OF THE EVERBEARING SORTS TO SUPPLY THE DEMAND.

PROGRESSIVE. A wonderful fall-bearing strawberry and considered the best by many growers. The spring-set plants not only produce a big crop of berries the same season, but the runner plants commence to bear fruit as soon as set, and quite often you will find a runner plant full of blossoms and berries before it has made any roots, and in this way Progressive yields a crop of fruit the first year that is truly wonderful. The fruit of the Progressive is of good size, smooth, of good color and appearance. The plant is a good grower and healthy.

SUPERB. Many growers consider the Superb the best ever-bearing variety, but we find the Progressive ahead of Superb here in Delaware. The Superb is not as good a grower as Progressive, but is ideal for the hill system of growing; neither does it produce as many berries here with us, but the berries are of large size and very handsome. The Superb is not only a good fall-bearing sort, but one of the most profitable varieties to plant for a regular crop.
Let Buntings' Shrubs Beautify Your Home

FLOWERING SHRUBS
(Also see page 7)

We are growing a selected list of the best flowering shrubs, no lawn is complete without them. In our list one may select a few varieties which will give flowers from early Spring until late fall. Before planting cut back about half the tops which insures plants living, and gives them a fine compact, symmetrical top for the future.

**SPIREA VAN HOUTTEI**
- Plant grows about 5-6 feet high and has long splendid branches that gracefully droop with their foliage and flowers. Extensively planted as specimens on lawns, borders and hedges. White flowers in May.

**SPIREA ANTHONY WATERER**
- Dwarf habit of growing. Very dense; fine for base planting. Blooms in great profusion the entire summer and fall. Rose pink flowers.

**DUETZIA CRENATA**
- Flowers pinkish white, very compact growth, June.

**DUETZIA LEMOINE**
- Somewhat dwarf habit of growing. In June the plants are literally covered with snow white flowers.

**DUETZIA PRIDE OF ROCHESTER**
- Double white flowers, slightly tinged with rose. June.

**DUETZIA GRACILLIS**
- Dwarf only 2-3 feet when grown, fine for planting in groups on the lawn and for borders. Pure white flowers in June.

**HYDRANGEA ARBORESCENS GRANDIFLORA**
- Hills of Snow). Begins to flower in June and continues until October. Flowers large snow white,

**HYDRANGEA OTAKSA HORTENSIA**
- Fine for planting near the dwelling. Flowers generally blue with a few exceptions they are a delicate pink. Blooms in great profusion all the summer. A Japanese variety.
Buntings’ Nurseries, Selbyville, Delaware

**Hydrangea Paniculata Grandiflora.** Well known and justly popular. Flowers are borne on huge panicles from 8 to 12 inches long. Pure white first, afterwards changing to pink. Begins blooming in August and flowers hang on until winter.

**Tree Shaped Hydrangea Paniculata Grandiflora.** Trained in nursery to tree form. Very popular.

**Buddleia.** (Note Weigela flowers.) A beautiful shrub from Japan, bearing sweet scented flowers of a rosy lilac color. Flowers borne by the hundreds on flower beds which are 8-12 inches long. Blooms in great profusion from early summer until cold weather.

(Note—Before shipping it is necessary for us to cut back the tops to avoid damaging plant when packing.)

**Snowball.** (Virburnum Moons.) Favorite shrub with globular clusters of white flowers. Bloom in May.

**Japan Snowball.** A new variety from China. It surpasses the old variety in several respects. Pure white flowers, 3-4 inches across.

**White Lilac.** Delicate white flowers, shaded with purple. Blooms in May.

**Chas. X. Lilac.** Well known favorites; purplish red flowers.

**Weigela Eva Rathke.** Flowers are deep garnet red and are produced in abundance throughout the entire summer and autumn.

**Weigela Rosea.** Bright rose colored flowers in June. Plant very hardy, branches droop with their load of flowers.

**Rarberry Thunbergii.**

**Blue Dogwood.** Flowers white, blooms in June. Bark blueish green.

**Red Dogwood.** Flowers red, blooms in June.

**Honeysuckle.** Pink Tartarian. Grows bush form. Intensively sweet-scented and good bloomer.

**Althea.** (Rose of Sharon). One of the best shrubs planted. Begins blooming early summer and continues through the Autumn months. Plant grows upright, very hardy. We have them double and single flowering of red, white and blue.

**Golden Bell.** (Forsythia Fortunei). Bell shaped, deep yellow flowers in April before leaves appear, very attractive owing to time of flowering.

**Weeping Golden Bell.** (Forsythia Fortunei). Long drooping branches, covered with showy golden yellow flowers in April.

**Golden Bell.** (Forsythia Intermedia). Very free flowering of golden yellow blooms which covers the bare branches in April.

**Flowering Almond.** (Amygdalus.) Very popular. Red or White.

**Double Flowering Peach.** Very desirable. Early spring before leaves appear. Branches are literally covered with large double flowers. Does not fruit. We have them both red and white.

**Cyonidia Japanica.** (Japan Quince). Medium growing shrub, foliage dark green. During May the plant is in a blaze of color with flowers.

**Hardy Climbing Shrubs**

**Wisteria Purple.** One of the best ornamental vines, blooms purple in great profusion during spring. Fine for trailing porches, trellises, etc.

**Wisteria White.** Same as Wisteria Purple, except flowers are white.

**Clematis Paniculata.** A splendid climber. Flowers show white, produced in great numbers during summer and autumn. Extensively planted.

**Blue Myrtle.**

**Crape Myrtle.**

**Matrimony Vine.** Blooms purple flowers in great profusion from middle summer until freezing weather. Very popular.

**Honeysuckle Halliana.** Flowers from May until November, almost an Evergreen, useful for covering trellises and unsightly objects.

**DUTCHMAN'S PIPE.** (Aristolochia Sipo) Flowers are green, of a quaint pipe shape. Large heart shaped leaves.

**BOSTON IVY.** (Ampelopsis Veithii). Considered one of the very best climbing vines for any position a vine is desired.

---

**PURPLE WISTERIA**

FLOWERING SHRUBS
(Also see page 7)

We are growing a selected list of the best flowering shrubs, no lawn is complete without them. In our list one may select a few varieties which will give flowers from early Spring until late fall. Before planting cut back about half the tops which insures plants living, and gives them a fine compact, symmetrical top for the future.

Spirea Van Houttei. Plant grows about 5-6 feet high and has long splendid branches that gracefully droop with their foliage and flowers. Extensively planted as specimens on lawns, borders and hedges. White flowers in May.

Duetzia Crenata. Flowers pinkish white, very compact growth, June.

Duetzia Lemoine. Somewhat dwarf habit of growing. In June the plants are literally covered with snow white flowers.

Duetzia Gracillis. Dwarf only 2-3 feet when grown, fine for planting in groups on the lawn and for borders. Pure white flowers in June.

Hydrangea Arboresceus Grandiflora. Hills of Snow). Begins to flower in June and continues until October. Flowers large snow white.

Hydrangea Otaksa Hortensia. Fine for planting near the dwelling. Flowers generally blue with a few exceptions they are a delicate pink. Blooms in great profusion all the summer. A Japanese variety.
Hydrangea Paniculata Grandiflora. Well known and justly popular. Flowers are borne on huge panicles from 8 to 12 inches long. Pure white first, afterwards changing to pink. Begins blooming in August and flowers hang on until winter.

Butterfly Bush. (Buddleia). Summer Lilac. A beautiful shrub from Japan, bearing sweet scented flowers of a rosy lilac color. Flowers borne by the hundreds on flower beds which are 8-12 inches long. Blooms in great profusion from early summer until cold weather. (Note—Before shipping it is necessary for us to cut back the tops to avoid damaging plant when packing.)

Japan Snowball. A new variety from China. It surpasses the old variety in several respects. Pure white flowers, 3-4 inches across.

Weigela Eva Ruthke. Flowers are deep garnet red and are produced in abundance throughout the entire summer and autumn.

Weigela Rosea. Bright rose colored flowers in June. Plant very hardy, branches droop with their load of flowers.

Rarberry Thunbergii.

Blue Dogwood. Flowers white, blooms in June. Bark blueish green.

Red Dogwood. Flowers red, blooms in June.

Althea. (Rose of Sharon). One of the best shrubs planted. Begins blooming early summer and continues through the Autumn months. Plant grows upright, very hardy. We have them double and single flowering of red, white and blue.

Golden Bell. (Forsythia Fortunei). Bell shaped, deep yellow flowers in April before leaves appear, very attractive owing to time of flowering.

Weeping Golden Bell. (Forsythia Fortunei). Long drooping branches, covered with showy golden yellow, flowers in April.

Golden Bell. (Forsythia Intermedia). Very free flowering of golden yellow blooms which covers the bare branches in April.

Flowering Almond. (Amygdalus.) Very popular. Red or White.

Double Flowering Peach. Very desirable. Early spring before leaves appear. Branches are literally covered with large double flowers. Does not fruit. We have them both red and white.

Cydonia Japanica. (Japan Quince). Medium growing shrub, foliage dark green. During May the plant is in a blaze of color with flowers.

**Hardy Climbing Shrubs**

Wisteria Purple. One of the best ornamental vines, blooms purple in great profusion during spring. Fine for trailing porches, trellises, etc.

Wisteria White. Same as Wisteria Purple, except flowers are white.

Clematis Paniculata. A splendid climber. Flowers snow white, produced in great numbers during summer and autumn. Extensively planted.

Blue Myrtle.

Crape Myrtle.

Matrimony Vine. Blooms purple flowers in great profusion from middle summer until freezing weather. Very popular.

Honeysuckle Haliana. Flowers from May until November, almost an Evergreen, useful for covering trellises and unsightly objects.

DUTCHMAN'S PIPE. (Aristolochia Sipo) Flowers are green, of a quaint pipe shape. Large heart shaped leaves.

BOSTON IVY. (Ampelopsis Veithii). Considered one of the very best climbing vines for any position a vine is desired.

**PURPLE WISTERIA**
HYBRID TEAS OR EVERBLOOMING ROSES

La France. Rich sanity peach, changing to deep rose. Large. The sweetest of all. Everblooming.

Kaiserine Augusta Victoria. Flowers large and finely formed, borne singly on strong upright stems. Color pure white, shading to lemon with age.

Baby Ramblers. Clear, brilliant ruby rose. Blooms early in June and continues until frost. We have them red, white and pink.

PEONIES

Festivia Maxima. The best of all peonies. Large bloom, white, with here and there a fleck of crimson.

Duchess De Nemours. Pure white blooms, large and full double.

Dear Sirs:

Kindly let me know when it is time to set out a Koster's Blue Spruce, also, a Norway Spruce.

If it is time now kindly let me know at once, so I can send you the money for both trees and have them now.

The trees that you sent me in the spring are all living, so I know I can deal with you.

Yours,

PERCY SPENCER.

New Jersey.

July 20th, 1920.

Buntings' Nurseries, Selbyville, Delaware

HYDRANGEA—Paniculata Grandiflora

We accept Liberty Bonds of all issues at face value in payment for Nursery Stock, but no cash discount is allowed when payment is made by bonds. Send bonds by registered mail.
CALIFORNIA PRIVET
See fourth cover page

One of the leading hedge plants and undoubtedly the largest planted of them all; its foliage produces abundantly the deepest, richest green, almost an evergreen; does not shed its foliage until late winter and then only in an exposed condition. Very hardy easily and quickly pruned, you may shape it in any position desired by trimming. They should be planted \( \frac{3}{4} \) inch deeper than they stood in the nursery row; where you set it dig about 12 inches deep and 12 inches wide use some stable manure at the roots (do not use any commercial fertilizer), set the plants if small grade 4 inches apart in the row, if large grade, 6 inches apart in the row, dip the roots in water before planting; after plants are set cut them down to 4 inches from the surface of the ground, this will cause a thick new growth to start, and is very essential for a beautiful hedge, do not cut back again until they have made 10 inches of new growth, when cutting each time allow about 1 to 2 inches above where it was cut before until you get the height desired. After planting spread barn-yard manure at surface of ground; keep free from weeds the first two years, by this time it will get its start, then nature will do the rest. Did you ever realize what an admiring and luxuriant privet Hedge you could secure at a very small cost, and how much it would add to the value of your property? To find the exact number wanted, measure the space where it is to be planted 'and if set 4 inches apart multiply the number of feet by 3; if planted 6 inches apart multiply the number of feet by 2, this will give the exact number. Our privet is strictly first class, well branched and heavy rooted. Can be successfully set any month in the year that the soil is not frozen, except June, July and August.

BARBERRY THUNBERGII

This is not the variety of Barberry which spreads wheat rust, and can safely be planted.

Planting instructions for Barberry are the same as for California Privet when planting it for a hedge, except that it should be set 8 to 10 inches apart. For lawn planting, instructions same as other shrubs.

For a low hedge Japanese Barberry Thunbergii stands at the head of the list, it succeeds without much attention, may be pruned or not just as the owner chooses, without pruning it will form a compact mass, so thick a cat can't get through. Barberry is hardier than California Privet. Spring and Summer leaves are very green and attractive; in autumn after most other shrubs are bare, its small oval leaves then assume rich crimson colors and the slender branches droop with their load of bright red berries which hang on until late winter. Owing to its dwarf habit of growing it is also extensively planted for borders, and single and bunched specimens on the lawn, no other shrub or hedge plant surpasses Barberry Thunbergii.

Our stock of Barberry has been twice transplanted, and is strictly first class, well branched and heavily rooted.

Dear Sirs:
I received Privet plants and roses all in good order. I thank you for the stock that I have received. I have recommended you to several of my neighbors. We have the trees planted and they look fine.
Thanking you for your promptness in filling my order, I am, Respectfully yours,

MRS. TOPPING.

April 21st, 1920.

Gentlemen:
The two thousand strawberry plants that I ordered of you not long ago come in on time. They were fine and put up in a No. 1 shape. Every plant lived and are growing nice.
I am recommending you to all of my friends here.
Very truly yours,

W. G. LANG.

Apr. 29th, 1920.

Virginia.
**PARCEL POST**

Nursery Stock of all kinds are now admitted to the mails at Parcel Post rates. If you are not certain ask your postmaster which zone Selbyville, Del., is in from you post-office, and figure the amount of postage to send; we are below giving estimates of weight of stock when packed for shipment, also U. S. Parcel Post rates. It seems impossible to figure the exact amount of postage to send, as stock varies in weight, AND WE RECOMMEND if Parcel Post shipment is desired, to remit in full for trees and plants you order at catalogue prices and mark your ORDER SHEET PARCEL POST C. O. D. FOR POSTAGE ONLY. By so doing you pay to your postmaster or R. F. D. Carrier the actual cost of mailing when he delivers the stock to you.

We cannot ship by Parcel Post any Evergreens. We cannot ship by Parcel Post any tree or plant larger than 3-4 feet.

We strongly recommend that Strawberry plants and grape vines be ordered shipped by Parcel Post; extra large orders by express. We recommend express or freight shipments for large orders.

Gentlemen:—
My order is all safely planted. Arrived in best of condition, and for the prompt arrival and fine plants, you hold the record of all of my orders. And it is a great satisfaction to plant trees that is in leaf and looking as if they had been there for months, and the packing is perfect.

The stamps that you sent for the Scotch broom that you were sold out, I am returning as the exact price of a Grimes Golden apple tree, which I will be greatly pleased if you will send me by parcel post. Our mail man can collect postage due on its arrival. Thanking you for the same and your careful considerations, I am very pleased to remain,

Yours very sincerely,

MRS. BENJAMIN EARINS CROWELL,
May 10th, 1920.
Pennsylvania.

Dear Sirs:—
Strawberry plants arrived in excellent condition. Have set them out and all seem to be growing nicely. Thanking you for your promptness in filling the order, I remain, Very truly yours,

DONAL MCPHERSON,
Apr. 15th, 1920.
Westport, California.

Sirs:—
Received roses, and in good condition. Will want more in the spring.

Respectfully,

MRS. B. F. GALLIAGHER,
Delaware.

Gentlemen:—
My order for hedge has been received by me, and in splendid condition.
Thanking you for same, I am, Yours truly,

CAL KNEER,
May 13th, 1920.
Pennsylvania.

Dear Sir:—
I received your order O. K., and am very much obliged, everything is in good condition, and I am very much pleased.
Your truly,

JOHN VIAGOFSKI,
Wilmington, Del.

Gentlemen:—
Thank you very much for sending trees so promptly, and I must say that I am very much pleased with such healthy and strong looking trees.
Respectfully yours,

MRS. CHANEY,
Apr. 29th, 1920.
Chester, Pa.

Dear Sirs:—
Your shipment to hand on the 9th, and was in first class condition, and was more than pleased with them.
Thanking you, I beg to remain,
Respectfully yours,

LINDLEY P. NICHOLAS,
Apr. 18th, 1920.
Maryland.
American Arborvitae growing in our nurseries

Rules For Other Distances

Multiply the distance in feet between the rows by the distance the plants are apart, in the rows, and the product will be the number of square feet for each plant or hill, which, divided into the number of square feet in an acre (43,560) will give the number of plants or trees to an acre.
Transplanting Directions

In presenting these instructions to our patrons, we should earnestly request that they give the most careful attention to the details. We having fulfilled our part by furnishing first class stock in good condition, also giving necessary instructions how to plant and care for it, if any of our customers should lose a part of their stock, the fault cannot be on our side. We allude to this because years of experience have taught us that the public lose nursery stock because they neglect it. We guarantee to supply first class stock in good condition, and could we plant and care for it, would willingly ensure success with it. ANYTHING THAT HAS TO BE CULTIVATED IN THE EARTH CAN NO MORE LIVE WITHOUT CULTIVATION, THAN CAN A HUMAN BODY LIVE WITHOUT NOURISHMENT.

THE PROPER SEASON. For transplanting Nursery stock is during the months of late October, November and December in Autumn, and February, March and April in the Spring.

ON RECEIPT OF TREES. Store in a cool place protected from wind and sun, plant as soon as possible. When stock arrives frozen do not unpack, place same in a room without heat or frost until it thaws out. When trees are received several days or weeks in advance of the date you will be ready to plant, unpack and open the bundles, bed them out until you are ready to plant. When doing this dig a trench deep enough to admit all roots, and cover with mellow earth, extending well up the bodies of the trees. Select spot where no water stands.

ON RECEIPT OF STRAWBERRY PLANTS. If impossible to set the plants as soon as received immediately remove them from the crates open the bundles of plants and bed them in a V-shaped trench, in soft moist soil, preferably in shade of some kind, when bedding do not cover the buds or crowns. Use plenty of water as soon as bedded, if cared for in this way they will keep in fine condition for two to three weeks. When bedding press the soil firmly to the roots. Mulch with straw after bedded.

NOTICE.—The above show the right and wrong way to plant trees. Plant and trim according to Fig. 2 and you will have no trouble in making your trees grow.

THIS IS THE SECRET OF SUCCESS.

For success our customers begins to grow or it will be fatally injured through strangulation.

The above illustration presents vividly the difference between correct and incorrect planting. In Fig. 1 too small a hole has been dug, and the roots have been crowded into it in such a way that if the tree lives at all it will be at the cost of a great effort and loss of vitality.

This is the method which is commonly practiced, and we cannot therefore too strongly warn our customers against it.

The roots must have plenty of room, and great care should be exercised to have them as nearly as possible in the same position which they occupied in the nursery.

In Fig. 2 the roots occupy this position, being carefully arranged, and the top has
been properly trimmed, regardless of the great injury to the present appearance of the tree. In transplanting under the most careful management, so many of the Fibrous roots are destroyed that it is very essential that the top be correspondingly removed. When brown, the fibrous roots are firm well again, this will hold the trees in proper condition, follow this by some loose soil raised about 3 inches away to prevent soil baking above roots of the tree, a mulch of barn-yard manure is much better for this purpose. It is only an advantage to a mulch, but a fertilizer also, any kind of straw may be used for the mulching which prevents the ground from baking or cracking and maintains an equal temperature, and supplies moisture for the roots. Do not fail to mulch, which require harsher pruning than other trees. Figure 4 represents one of the Peach trees as it is sent from the nursery. This shows how it should look when it is planted by the customer.

**PRUNING**

Do not cut back the tops of Evergreens when planting. The limbs of all fruit and shade trees, if removed, should be cut back two-thirds when planted.

The stumps should now be put in condition for a crop of planting by the removal of all the limbs to the point where it is desired to have the top; then cut back each remaining limb all the way to the stump of last season's growth. In the absence of any limbs suitable to form a form a top, cut the stump down to the root. As soon as the dormant buds to make the tip.

The necessity of pruning vigorously at the time of planting is generally unnoticeable to the planter, as it injures for a time the appearance of the tree to an unpractical eye. It should, however, be unhesitatingly performed, all the branches to the extent of at least one-half the length of the previous year's growth being removed. Care should be taken to remove the proper form to the tree. The head may be left high or low, as the taste of the planter may prefer, or the head on in some cases may require.

Always remove the straw and moss from the cay before planting. Never put manure so as to come in contact with the roots of any plant or tree. Use only good soil and sand for the cay.

The foregoing has been prepared with the greatest care, and with a special desire to aid our customers in the growth and care of their stock.

**CULTIVATION**

 Cultivate and hoe frequently. Nothing can thrive if the weeds and grass are allowed to sap the life of the soil. Truck crops should be planted in the orchard until the trees are large enough to require all of the soils fertility. Never plant cay in sod or clay. Plant strawberries 1 in. apart, but set the plants 1 in. apart, and 1 in. in all cases may require.

Always remove the straw and moss from the cay before planting. Never put manure so as to come in contact with the roots of any plant or tree. Use only good soil and sand for the cay.

The foregoing has been prepared with the greatest care, and with a special desire to aid our customers in the growth and care of their stock.

**HOW TO SET AND GROW STRAWBERRY PLANTS FOR BEST RESULTS**

The strawberry will thrive in a great variety of soils and locations. Any land that will grow good corn or small farm or truck crops, will grow strawberries, if properly drained. Strawberries are not a success in waterlogged land, springs and well drained is a good type of soil. IT MUST BE WELL DRAINED, we do not either recommend planting strawberries in high land unless in a section where there is ample rainfall for vegetation, and soil is very fertile, if the conditions are right, they prove the great success on extremely high sandy land. If you have grown strawberries on your land before, you know how to become a tourist that yourself about where they should be planted. Strawberries will do exceedingly well following truck crops, such as Tomatoes, Peas, Beans, Cabbage, etc., or on land that has been spread with barn-yard manure, as it is possible to plant strawberries and have a crop of strawberries, planted with strawberries, preceded by grain crop of peas.

**Preparing Land.** The land should be plowed deep, if possible, as this gives the water chance to go down quick when wet, and causes moisture to rise in times of drought. Lay off the rows, 4 feet apart, any pulverized or made smooth by use of some machinery either 34 or 4 feet apart, set the plants in the rows the first 1 to 1 1/2 feet in the row, rows 4 feet apart sets plants 1 foot apart in the row; either method is practical for field culture. See table accompanying this catalog for the number of plants required to set an acre at given distances. After plants are set, if there is to be only a few, set at every 7 to 10 days, keep all grass and weeds from the plants by use of a hoe, while in its infancy.

**Fertilizer.** Barn-yard manure spread on the land before plowing is very good, if this can be obtained it should be used. If this can not be done, make the soil before making up the rows, we have great success with 5 per cent ammonia, and 8 1/2 tons of farm manure. If the soil is 5-8-0 used in the row, mixed with the soil well before making up the bed to set the plants. Set both Sprays. Apply 10% AN POTTAS AT THE ROOT OF THE PLANTS, as this will eat off all of the fiber roots. As soon as the plants are set, give them 1% of any fertilizer, manures, or 10% of the rows, 4-8-8, 10-10-10. If manure, barn-yard or straw manure is used, and the plants need manures, if not be warned, of the manures. Never do either of the above in the spring before planting.

**Time To Set Strawberry Plants.** In the south plants should be set in January, February, and March, in the middle states March and April, in the Northern States APRIL. Plants should always be set as early as possible. If the plants are planted in the month of March, the soil may be very wet in April, if early, the plants will be well established. Set the plants in the spring before the soil has been thoroughly watered, and the plants are ready to be set in the ground. Before setting the plants, set the roots apart, and to set them in the soil. Make the soil when you are ready to plant them. This is the best method of all.
Picking Strawberries on the farm of L. P. Topping, Long Island, N. Y. Plants purchased from us Spring of 1919.

The illustration below shows our plants growing on the farm of Samuel F. Musser, Pennsylvania. Mr. Musser has been a regular customer for the past eight years and always has been successful by planting our New-Land grown plants.

These two and the other testimonials in this catalog tell what our stock is doing for our customers. One reason for this success is that we send our customers only such stock as we would plant ourselves. Another is that we give our personal attention to all the important work in the nurseries and know it is grown right, dug right and packed right. We always remember that your success means our success.
